*Spring  
is in  
bloom!*

Find out how a little planning and protection of your trees can assure a more beautiful and healthier growing season

## Seize the Season!

Leaves and blossoms are bursting out as spring arrives—and that's the perfect time to call on the experts at Brown Hill Tree Co. to evaluate your property and provide professional advice on pruning, insect and disease management, nutrients...as well as the manpower to clear up the debris from the harsh winter.

**PREVENT DAMAGE TO TREES AND LIMBS** caused by storms. Ask about how careful pruning and cabling can protect your valuable assets from unsightly breakage, destruction to the tree itself—as well as surrounding property and even your home! A little care now can lead to beauty and enjoyment for years to come. Call on us to help.

**TREE REMOVAL FROM WINTER DAMAGE** can be performed by our experienced crew. We have the expertise to properly remove the dead or damaged tree and return the property to its optimal condition. Thinking of planting a new tree? Visit our website for useful tips on how to choose the right tree for long-term satisfaction. To learn more visit [brownhilltreeco.com](http://brownhilltreeco.com).

**AVOID EXCESS FERTILIZER** when adding nutrients to the soil. Knowledge of the tree type, its surrounding soil, and the general environment are all necessary for the tree's—and your family's—well being. Many tree owners use excess fertilizer—or the wrong type—to nourish their trees—and do more harm than good. Our certified arborists can select the right combination of fertilizers in the proper amounts to maximize tree nutrition without harming the environment.

**EXPERT TREE PRUNING** is essential to the long-term growth and health of trees. Are your trees properly pruned? Ask our arborists to assess your trees. We'll prune with knowledge and experience to make your trees healthy and beautiful!

### Spring is short!

Call today for a no-obligation consultation and let us help you enhance Nature's beauty in this wonderful season of regrowth!

## Bugged by caterpillars?

### Did you know?...

...that for every tent caterpillar or gypsy moth egg mass, over 350 babies can emerge! Ask how we use the latest controls to stop the damage without harm to pets, children and other insects.

## Can Your Hemlocks Be Saved?

### Ask our arborists!

Brown Hill Tree Co., Inc has the ability to treat the Hemlock Woolly Adelgid (HWA), a pest that can cause tree death in just three to five years. We can evaluate your tree's health & provide effective, timely treatment.
